

Step 8 — Final Review & Handoff: Report

Date: 2026-09-18

Scope: Final confirmation that the static prototype, its documentation, and the handoff package are ready for internal review by the team, Jennifer, and eventually outside compliance counsel. Read-only except the final backup; no redesign, no compliance decisions, no live-site changes, nothing published.

Final backup: F:\website projects_backups\stradammanagement-pre-step8-20260918-211122\ — 121/121 files, verified.

This report continues directly from the in-chat Task 1–2 results already delivered (final backup, filesystem inventory, and the 13/16/17 page-count reconciliation). Those are not re-derived here.

Task 3 — Final State Verification (completed)

Design (confirmed in-chat): Navy & Gold tokens unchanged, Step 5 typography scale unchanged (84px/60px/45px), photography treatment utilities unchanged, responsive layout clean at 1440px/375px with 0 console errors.

Structure / Navigation: live-reconfirmed this pass —

- Services dropdown opens correctly and exposes exactly its 2 real destinations (`financial-planning` , `collaborative-divorce`), not the retired hub.
- FAQ accordion toggles `aria-expanded` correctly.
- Skip link present.
- Exactly 1 `<h1>` (spot-checked homepage; script-verified 72/72 in Step 7, no files have changed since that would affect heading counts).
- `--color-clay` token still resolves to `#B8985A` at runtime — confirms the CSS variable chain is intact, not just the source file.

Accessibility: unchanged since Step 7 — skip link, focus-visible outline, reduced-motion CSS/JS, FAQ/nav ARIA all present. The `consultation.html` H1→H3 heading-hierarchy gap and the gold-on-light contrast failures (`.btn--primary` 2.60:1, `.mark` , `.card__link` , `.blog-card__status` , `.principal-spotlight__creds` strong , `.policy-toc a::before`) documented in Step 7 remain **open** — not fixed, not regressed further. They are technical/design-system items, not compliance content, and are carried into this report's consolidated list (§4) for whoever does the next implementation pass.

SEO / prototype safety: `noindex`, `nofollow` reconfirmed on all 72 pages (script count: 72). 0 tracking scripts, 0 secrets, 0 new console errors — no drift since Step 7.

Compliance flags: reconfirmed 41 `compliance-draft__tag` occurrences sitewide via fresh grep — this matches Step 7's "40 flagged blocks + 1 informational blog-hub banner" exactly (Step 7 explicitly excluded the banner from its "40" count; including it here gives 41, so there is no real drift, just a different inclusion choice between the two counts). No compliance-flagged content was edited — confirmed by the file-modification list in §12 containing exactly one non-compliance technical fix (from Step 7, HTML-encoding a quote character, carried over, not repeated here).

One correction to a pre-existing historical document, noted rather than silently fixed:

`README.md` and the (pre-Step-4) `STRADA-FINAL-HANDOFF-REPORT.md` disagree on how many blog posts have real featured images — `README` says 28, the older handoff report says 27. The filesystem is authoritative: `assets/images/blog/` contains **28** files. Per instruction, the historical `STRADA-FINAL-HANDOFF-REPORT.md` was **not** altered; this is flagged here and the correct figure (28) is used in the new `STRADA-FINAL-HANDOFF.md` produced by this step.

Task 4 — Consolidated Outstanding Items (Steps 1–7)

Pulled from the STEP-5, STEP-6, and STEP-7 reports into one list, deduplicated. Nothing here has been resolved by this step — it is a consolidation, not new work.

1. `consultation/index.html` — H1→H3 heading hierarchy skip (Step 7).
2. Gold #B8985A text-on-light contrast failures in `.btn--primary`, `.mark` (2 homepage instances), `.card__link`, `.blog-card__status`, `.principal-spotlight__creds strong`, `.policy-toc a::before` (Step 7).
3. 55 blog meta descriptions use the repetitive "Migrated from the live site – [Title]." template (Steps 6 & 7).
4. 47 of 72 page titles exceed the 60-character SEO guideline, almost entirely blog posts (Step 7).
5. No favicon, no `sitemap.xml` / `robots.txt` / redirect map, no Open Graph/Twitter Card tags, no JSON-LD structured data anywhere (Step 7).
6. Google Fonts loaded via render-blocking `@import` rather than `<link>` (Step 7).
7. 4 oversized local images need re-compression, most notably one 2.0MB blog thumbnail (Step 7).
8. 53 externally hotlinked Unsplash images need replacing with licensed/final photography before production (Steps 2, 5, 7 — self-flagged in-page since Step 2).
9. `client-prep/index.html` — real 5 pre-consultation questions not recoverable from the live site's embedded form; page remains unlinked pending Jen (Step 4 onward).
10. `for-attorneys/index.html` — 2 unmigrated partner-resource downloads need a decision on linking/re-hosting (Step 4 onward).
11. `services/index.html` — kept on disk, unlinked, by explicit Step 4 decision; still needs a final call on whether it's deleted or repurposed before production.

12. The 3 hash-like blog slugs (`klq2nmtpc3ydv0xdjmzo6r0wk67hr1` , `s3a72zclibwz2v8ga8c0j4glwjnr03` , `u11udp30w9bwetirpz3ev0zbf94t2r`) remain unresolved migration artifacts.
 13. Core/hub page-count terminology is ambiguous across historical documents (13 / 16 / 17 depending on whether FAQ children and/or the unlinked services stub are counted) — resolved by explanation in Task 2, not by picking one number as "correct."
 14. No version control (git) exists for the project — see Task 10.
-

Task 5 — Consolidated NEEDS JEN List

Item	Location	What's needed
Pre-consultation questions	/client-prep	The real 5 questions from the live Squarespace form editor (or from Jen directly) — the page currently holds only real framing copy, no invented questions.
Partner-resource downloads	/for-attorneys	Confirm whether "Collaborative Team Alignment Check-In" and "Collaborative Team After-Action Rubric" should be linked out or re-hosted.
Disclosures contact detail	/disclosures	Confirm the (866) 526-7098 / ssakala@stradamanagement.com contact detail is still current.
Privacy Policy currency	/privacy-policy	Confirm the policy's stated effective/review status is current ("Needs Jen — Confirm Current").
Privacy Policy contact detail	/privacy-policy	Same contact-detail question as Disclosures, flagged separately on this page.
General Privacy Policy gap	/privacy-policy	One item tagged plainly "Needs Jen" with no further detail captured in the source — flagged for Jen to review directly on the page.
The 3 hash-like blog slugs	/blog/klq2nmtpc3ydv0xdjmzo6r0wk67hr1 , /blog/s3a72zclibwz2v8ga8c0j4glwjnr03 , /blog/ul1udp30w9bwetirpz3ev0zbf94t2r	Real slugs/canonical titles for these 3 migrated posts, if they exist on the live site under clearer URLs.
services/index.html disposition	/services (unlinked)	Confirm whether this stub should be deleted, or repurposed as a real services-overview page, before production.

Task 6 — Consolidated NEEDS COUNSEL List

Item	Location	What's flagged
Fee figures, fee-only/flat-fee, no-minimums language	Homepage ("Engagement"), /services/financial-planning	SEC Marketing Rule review of pricing/fee-structure claims.
Testimonials, awards, speaking/book references	Homepage ("Recognition")	Withheld entirely pending counsel approval under the SEC Marketing Rule.
"PlanThruDivorce™" + "Proven System"	/services/collaborative-divorce	Trademark status + performance-adjacent framing.
Fee/minimum/custody/fiduciary-status questions	/faq	Intentionally excluded from all 4 FAQ libraries pending counsel-approved language.
Florida investment-adviser registration language	/disclosures	Quoted verbatim from the live site, pending confirmation it's still accurate and properly reproduced.
One additional Disclosures gap	/disclosures	Tagged "Needs Counsel — Gap Found" — a content gap identified during migration, not yet filled.
Privacy Policy new-section + 2 general items	/privacy-policy	One tagged "Needs Counsel — New Section" (a section the live policy may be missing), plus 2 more generically tagged "Needs Counsel."
20 of 55 blog posts	/blog (see hub compliance banner)	14 flagged for fee/fiduciary/named-party/case-figure content; 6 FROZEN — a real court case, a third-party investment offer, performance-based claims (including the "\$6K into millions" post), and partisan political commentary.

Task 7 — Production SEO / Migration Checklist

Not implemented now — this is the punch list for whoever takes the prototype from "compliance-approved" to "live," in rough dependency order:

Content gates (must happen first — blocks everything else):

1. Jen's items resolved (§5).
2. Outside counsel's items resolved (§6) — nothing here publishes without that sign-off, per standing project rule.
3. `services/index.html` disposition decided.
4. The 3 hash-slug posts resolved or intentionally left as-is.

Technical/SEO build-out (can happen in parallel with content gates, but must not go live before them):

1. Remove `noindex`, `nofollow` from every page — **only after** counsel sign-off, and only on the pages actually cleared to publish (a partial-publish is realistic given the FROZEN/flagged blog posts).
2. Add `sitemap.xml` and `robots.txt` for the real production domain.
3. Add a favicon.
4. Add Open Graph / Twitter Card tags (needs final approved copy first, or it'll need redoing).
5. Add `FinancialService` / `LocalBusiness` schema to core pages and `BlogPosting` schema to cleared blog posts.
6. Add production `rel="canonical"` tags.
7. Replace the 55 blog meta descriptions' migration-template text with real, unique descriptions.
8. Trim the 47 over-length page titles where practical.
9. Fix the `.btn--primary` and other gold-on-light contrast failures (§4, item 2).
10. Fix the `consultation.html` heading hierarchy (§4, item 1).
11. Switch Google Fonts from `@import` to a `<link>` /preconnect pattern.
12. Re-compress the 4 oversized local images.
13. Replace all 53 hotlinked Unsplash images with licensed/final photography.
14. Build and test the real production redirect map from live Squarespace URLs to the new structure (explicitly out of scope for Steps 1–8; the prototype's IA is final, but the redirect map itself hasn't been built).
15. Confirm production hosting/DNS target and cut over.

Task 8 — Compliance Workflow

The established, unbroken workflow this project has followed since Step 1, restated for handoff clarity:

1. **Draft** — content migrated or built into the static prototype, with every compliance-sensitive claim marked in-page via a visible `compliance-draft` component (never hidden in a code comment) tagged "Draft — Compliance Review Required," "Needs Jen," "Needs Counsel," or "FROZEN." (*Current state — complete for all 72 pages.*)
2. **Jen review** — Jennifer reviews the flagged items in §5: confirms facts, supplies missing content (pre-consultation questions, partner-resource decisions), and confirms current contact/policy details.
3. **Outside counsel review** — counsel reviews the items in §6 against FINRA/SEC/Texas State Securities Board rules: fee language, testimonials/awards, trademark usage, the FROZEN blog posts, and any Jen-confirmed content that touches compliance-sensitive claims.
4. **Revision** — approved language replaces the flagged draft text; anything counsel rejects is either cut or reworded per counsel's direction — never guessed at by this workflow.
5. **Final counsel sign-off** — nothing in §7's "remove noindex" step happens before this.
6. **Publish** — production build-out (§7) executes, the approved content goes live, and the live Squarespace site is only then retired/redirected.

Standing rules that apply at every stage (unchanged since Step 4): never use the word "referral"; archive/back up before any change (this project's `_backups` folder chain, §9, is that archive); nothing publishes without counsel sign-off.

Task 9 — Final Handoff Package

The prototype itself: `F:\website projects\stradamagement\` — 72 HTML pages, 2 CSS files, 1 JS file, 34 image assets, previewable via `node .claude/serve.js` on port 4210.

Documentation set (all in the project root):

- `README.md`, `CONTENT-INVENTORY.md`, `FINAL-QA-REPORT.md` — pre-existing project documentation (2026-09-17), untouched.
- `STRADA-COMPLETE-PROJECT-REPORT-STEP-1-8.md` (+ `.pdf` + `.pdf.extracted.txt`) — pre-existing (2026-09-17), untouched. Note: despite its "STEP-1-8" filename, this document predates the Step 4–8 work done in this conversation; it should not be read as covering those steps.
- `STRADA-FINAL-HANDOFF-REPORT.md` — pre-existing (2026-09-17), untouched, superseded for current-state purposes by the new `STRADA-FINAL-HANDOFF.md` (§14).
- `STEP-5-DESIGN-IMPLEMENTATION-REPORT.md`, `STEP-6-BUILD-IMPLEMENTATION-REPORT.md`, `STEP-7-QA-SEO-COMPLIANCE-PRECHECK-REPORT.md`, `STEP-8-FINAL-REVIEW-AND-HANDOFF-REPORT.md` (this file) — produced this conversation, current.
- `STRADA-FINAL-HANDOFF.md` (new, §14) — the current, up-to-date executive handoff summary.

Backup / version chain (`F:\website projects\_backups\`, chronological):

1. `stradamagement-pre-step4-20260918-054949`

2. `stradamanagement-pre-step5-20260918-062022`
3. `stradamanagement-pre-step6-20260918-204223`
4. `stradamanagement-pre-step7-20260918-205521`
5. `stradamanagement-pre-step8-20260918-211122` (final, this step)

Each backup is a complete, timestamped, restorable snapshot taken immediately before that step's work began.

Logistics note (not a blocker): the handoff package currently lives only on this local machine. Per the project's reference notes, Strada work is tracked in Slack `#strada-wealth-management` — the team should decide how this package (prototype + reports + backups) gets shared there or to a shared drive; that distribution step is outside this session's scope.

Task 10 — GitHub / Prototype Status

No git repository exists for this project — confirmed via `git status` (`fatal: not a git repository`), and no `.git` directory anywhere in the tree. There is no GitHub remote. Version history has instead been maintained entirely through the manual timestamped backup chain in §9, which has reliably captured a restorable snapshot before every step since Step 4.

This is a legitimate, working approach for a solo-session static-file project and is not itself a blocker for internal review. If the team wants proper diff/history/collaboration tooling before or during the Jen/counsel review cycle, initializing a git repository (and optionally a private GitHub repo) at this point would be low-risk — nothing in the current backup chain would need to change. Left as a recommendation, not performed, since it wasn't requested and isn't required for the current review.

Task 11 — Final Browser Check

Live-reconfirmed this pass (light check, not a full re-sweep — Steps 6 and 7 already completed exhaustive 72-page sweeps at 1440px/375px with 0 issues, and no page/CSS/JS file has changed since except the one Step 7 meta-description fix):

- Services dropdown: opens correctly, exposes its 2 correct destination links.
- FAQ accordion: `aria-expanded` toggles correctly.
- Skip link: present.
- H1 count: 1 (homepage, live-checked).
- `--color-clay` custom property resolves correctly at runtime (`#B8985A`).
- 0 console errors on the pages touched this pass (homepage, a service page, at 1440px and 375px).

Task 12 — Final Prototype Safety Check

- `noindex, nofollow` : 72/72 pages, reconfirmed via fresh grep this pass.
- 0 tracking/analytics scripts sitewide, reconfirmed.
- Contact form still has no `action / method` — no live submission path exists.
- No file outside `F:\website projects\stradamamanagement\` (and its `_backups` sibling) was touched this session.
- **Live Squarespace site:** not accessed, not modified, at any point in Step 8.
- **Files modified in Step 8:** none. (The only file changed in the entire Step 7–8 window remains the single Step 7 meta-description HTML-encoding fix, reconfirmed intact and unchanged in §3.)

Task 13 — Readiness Determination

Is the prototype ready for internal review (team, Jennifer, and eventually outside counsel)? **Yes**, on the following basis:

- All 72 pages build, render, and function correctly across all tested breakpoints and interactions, with 0 broken links, 0 broken images, 0 console errors.
- Every compliance-sensitive claim is visibly, consistently flagged in-page (not hidden) with a clear tag identifying whether it needs Jen, counsel, or both — nothing ambiguous is silently presented as final.
- No content was invented anywhere to fill a gap; every gap is explicitly marked as a gap.
- The live Squarespace site was never touched or put at risk.
- The prototype cannot be mistaken for a production site (`noindex, nofollow` everywhere, explicit "Design prototype — not for publication" language in every footer).
- Outstanding technical/SEO/performance items (§4, §7) are real but are exactly the kind of items appropriate to fix *after* internal review and *before* production — they do not block a team/Jen/counsel review of the design, structure, and flagged content, which is what this phase is for.

This is not a determination that the site is ready for production — that requires the Task 7 checklist and the Task 8 workflow's counsel sign-off, neither of which has happened yet.

Task 14 — Final Report

This document (`STEP-8-FINAL-REVIEW-AND-HANDOFF-REPORT.md`) plus the companion `STRADA-FINAL-HANDOFF.md` (current-state executive summary) constitute the Step 8 deliverable.

STEP 8 STATUS: COMPLETE — READY FOR INTERNAL REVIEW
